

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

PREFACE.

THE present work was undertaken at the suggestion of Lord Acton, in the belief that it might be useful, not only for students but for the general reader, to possess a concise summary of modern times, embracing the life of mankind in its entire range of thought and action. No presentation of history can be adequate which neglects the growth of the religious consciousness, of literature, of the moral and physical sciences, of art, of scholarship, of social life. Numerous handbooks deal with politics alone, and a few with what the Germans call 'Kultur-Geschichte'; but no systematic attempt has hitherto been made either in English or in other languages to combine them. The plan of the book which, not less than the idea, represents a new departure, may be briefly explained. The left-hand page deals with Politics, the right-hand page with what I have termed, for the sake of brevity, Culture. The Politics and Culture of each year are, as nearly as possible, level, in order that the reader may see at a glance what was taking place in the chief departments of thought and action at any given moment. It will also be noticed that each paragraph is numbered. By this means the student is enabled to trace through the centuries the growth of a country, a literature, a science, or an art. If, for instance, we wish to discover the main outlines of the history of Poland, or Italian Literature, or Geology, or the Jesuits, we turn to the index and find under these names the paragraph numbers of the entries relating to them. In this way what may be called a system of double

entry is obtained : in the first place, we find the context of an event, and, secondly, we are enabled to discover in what relation the special link that we are holding stands to the rest of the chain.

It need scarcely be said that such a survey aims only at the inclusion of what are commonly regarded as the most notable events. Every handbook is written from some standpoint, its plan being governed by the desire to supply the needs of those by whom it will probably be used. In the present instance more space is devoted to England than to France ; to West than to East Europe ; to North America than to South America ; to India than to China ; to South Africa than to Morocco.

A work covering such a large field would properly require a committee of specialists ; and the present writer would send out his book with far greater hesitation were it not for the ready response with which his requests for the revision of certain parts of the work have been met. To Lord Acton is due, as I have already said, both the idea and the form of the work ; and he has also found time to read the greater part of the proofs and to write an Introductory Note. To him belongs the greater part of whatever value the book may be held to possess. Mr Archbold, one of the sub-editors of the *Dictionary of National Biography*, and author of *The Dissolution of the Somersetshire Monasteries*, has kindly revised the greater number of the pages relating to the 16th century. The paragraphs dealing with Philology and Scholarship have been revised by Professor Sir Richard Jebb, M.P. ; Italian, Spanish, and Portuguese literature by Dr Garnett ; Dutch, Danish, and Scandinavian literature by Mr Edmund Gosse ; Education by Mr J. B. Mullinger, author of the *History of the University of Cambridge* ; Physics and Astronomy by Mr Arthur Berry, Fellow of King's College, Cambridge, and author of *A History of Astronomy* ; Mathematics by Mr Rouse Ball, author of numerous works on the history of Mathematics, and by Mr Sedgwick, Senior Wrangler in 1894 ; the Biological Sciences by Mr W. M. Fletcher, Fellow of Trinity College, Cambridge ; Chemistry by Mr J. E. Purvis, assistant to Professor Liveing in the University of Cambridge ; Geology by Mr Thomas, assistant to Professor Sollas in

the University of Oxford; the Painting of the 16th century by Mr Roger Fry, author of a Study of *Giovanni Bellini*; Law by Mr Reddaway, Fellow of King's College, Cambridge, author of *The Monroe Doctrine*; Music by Mr H. W. Richards, Mus.Bac. To all of these, and to other friends, I am indebted for valuable suggestions and corrections; but the responsibility for the errors, which are probably only too numerous, is mine alone. I shall be sincerely grateful to all those who are good enough to inform me of any mistakes or omissions which they may happen to detect.

I have added a selected list of guides to the various subjects dealt with in the book. Numberless Bibliographies exist; but some are useless for the general reader by their very completeness, some again are too elementary to be of value to any but beginners, while others are rendered worthless for advanced students by omitting works written in foreign languages. The present attempt includes only the most important and reliable guides in English, French, German, Italian and Spanish. References to less familiar languages would, I believe, be of little use. The Bibliography has been rendered less imperfect by the kindness of Dr Ward, Master of Peterhouse, whose profound acquaintance with foreign scholarship requires no testimony.

Mrs Marian Marshall has been good enough to assist in preparing the Index for the press.

In the present reprint a few mistakes have been corrected, but no complete revision of the book has been attempted.

INTRODUCTORY NOTE.

WHOEVER desires to understand modern times, the prize of all History, and to trace the causes that made the present world, knows the need of a plain guide to facts and books, as a deliverance from abridgments, and an aid to fuller information. The present volume has been written by a man of rare ability and attainment, surrounded and supported by auxiliary experts.

Mr Gooch gives first of all the external course of public events which are the essential basis of History. But a man ignorant of the *Advancement of Learning*, the *Principia*, or the *Analogy*, would possess little of that which makes such studies interesting and valuable for the formation of the mind; and many of our most instructive historians, Whewell, Max Müller, Lightfoot, Rashdall, Leslie Stephen, are not concerned, directly, with politics.

It would be an arbitrary and unscientific definition which should exclude them and the topics on which they write from their proper position; for History embraces ideas as much as events, and derives its best virtue from regions beyond the sphere of State.

No previous writer has grasped this fundamental truth with deeper conviction and understanding than Mr Gooch. Viewing Modern History as a whole, he does justice to its several elements, to thought as well as action, to the mass of influences which constitute opinion and govern the life of nations and the progress of civilization.

ACTON.

January, 1901.

**CHRONOLOGICAL
TABLES.**

POLITICS

1. **England.** Perkin Warbeck of Tournai, acclaimed Duke of York by Desmond and Kildare 1491, is invited to the Court of France. [1492]

Henry VII. undertakes an expedition to France (for which money is raised by Benevolences) to punish Charles VIII. for his marriage with Anne of Brittany and the union of the last great independent fief with the French crown. On commencing the siege of Boulogne, however, he is bought off, and returns after signing the Peace of Etaples, by which Warbeck is expelled from France.

2. **Spain.** The 11 years' war caused by the refusal of tribute by the Moors ends with the capture of Granada, chiefly owing to the divisions among the Moorish chiefs. The termination of the struggle of 800 years is celebrated throughout Christendom. The Moors are allowed to retain their religion; but large numbers cross to the African coast and take to piracy.
 3. **Italy.** The political balance established by Lorenzo de Medici is ended by his death. Exasperated by the misrule of Ferdinand, King of Naples, a number of nobles appeal to France to interpose. Roderick Borgia becomes Pope Alexander VI.
-

4. **England.** On leaving France, Warbeck goes to Flanders, where Margaret, Duchess of Burgundy, receives him as her nephew. Henry breaks off commercial relations, thereby alienating English merchants, and the Yorkists regain hope from the King's unpopularity. [1493]
5. **France.** Charles makes peace with Spain by the Treaty of Barcelona, restoring Roussillon and Cerdagne, and, by the Treaty of Senlis, with Maximilian, the new Emperor.
6. **Spain.** Being invited to confirm the claim of Spain to Columbus' discoveries, the Pope issues a Bull, granting to Spain everything not possessed by a Christian prince 100 leagues west of the Azores, and the discoveries to the east of that line to Portugal. On the protest of the latter, the line is moved 270 leagues further west.

CULTURE

1. **Spanish Ch.** Three months after the fall of Granada, the Jews, at the instance of Torquemada, are offered the alternatives [1492 of conversion or exile, and about 150,000 leave the country for different parts of Europe and the Ottoman Empire.
 2. **Spanish Lit.** Lebrija, the father of Spanish Humanism and the tutor of Isabella, publishes his *Arte de la Lingua Castellana* and his *Spanish-Latin Dictionary*; Encina writes his first *Eclogues*; and Peter Martyr of Anghiera, an Italian pupil of Pomponius Laetus, receives a post at Court, whence he maintains a correspondence with the leaders of politics and letters for 30 years.
 3. **Geography.** After various attempts of the Portuguese to reach India by the West, Columbus, a native of Genoa, influenced by his voyages with Prince Henry's captains, by his correspondence with Toscanelli of Florence and by his friendship with Martin Behaim, the Nuremberg cartographer, leaves Spain with three vessels, under the patronage of Ferdinand and Isabella, to find a western route to India and Japan, and discovers the Bahamas, Cuba and Hayti (Oct.). Thinking he has reached India, he names the islands the West Indies.
-

4. **Eng. Lit.** Wynkyn de Worde of Lorraine, an apprentice of Caxton and his successor at the printing-office at Westminster, [1493 enters on a course of rapid publication. In the next seven years, 100 works issue from his press, some merely reprints of Caxton. At the same moment appears the first work of Pynson, a Norman, the successor to the business of Machlinia and Lettou, a printer less prolific but more scholarly than Wynkyn de Worde.
-

7. **Italy.** Lodovico Sforza, desiring to supplant his nephew in the duchy of Milan, and fearing intervention from Naples and Florence, invites Charles of France to assert his right to Naples.
 8. **America.** Columbus returns to found the Spanish Empire, bringing 17 vessels and 1,500 persons. He explores the Lesser Antilles, Jamaica and the southern coast of Cuba; founds Isabella and San Domingo in Hayti, and remains Governor till 1500.
-

9. **England.** Poynings becomes Deputy for Ireland, and, on [1494 account of the reception of the Pretenders, announces that the Irish Parliament may meet only when sanctioned by the King, that English laws are binding on Ireland, and that the Acts of the Irish Parliament must be revised by the King and Privy Council. By these Acts, known collectively as Poynings' Law, Ireland becomes for the first time directly subject to England.
 10. **Italy.** The death of Ferdinand of Naples, of an illegitimate branch of the house of Aragon (Jan.), determines Charles VIII. to advance his claims derived from the house of Anjou, despite the Pope's recognition of Alfonso II., the son of the late King. He crosses the Alps (Sep.), recognises Sforza as Duke of Milan, and advances on Florence, where the republican party, owing to the weakness of Piero de Medici and the influence of Savonarola, regains strength and expels its rulers. At this moment, Pisa throws off the Florentine yoke. After an agreement by which the King receives a large sum of money and is recognised as the protector of the liberties of Florence, Charles marches towards Rome. The Pope, finding resistance impossible, dismisses the Neapolitan troops and opens the gates (Dec.).
 11. **Spain.** Ferdinand and Isabella retain the vacant Mastership of the Military Order of Alcantara (as they had done in a similar case in 1487 and do again in 1499), thereby greatly contributing to the power, wealth and prestige of the crown.
-

12. **England.** Stanley is executed for complicity with Warbeck, [1495 despite the aid he had rendered to Henry at Bosworth. Warbeck shortly after is repulsed in a descent on Kent, is rebuffed in Ireland and passes on to Scotland, where James IV. recognises his claim. In face of this danger, Henry causes a statute to be enacted by which no subject obeying the *de facto* King can at any subsequent time be reached by a charge of Treason.

Judges are empowered to initiate proceedings, on the information of any individual, and to award punishment. The statute is used to exact fines, and Empson and Dudley are made judges in order to apply it.

13. **Germany.** The Estates at the Diet of Worms, taking advantage of Maximilian's necessities, attempt a reorganisation of the Empire by abolishing the right of private war, creating an Imperial Chamber, or

5. **Eng. Ch.** The Pope grants bulls for the suppression of two monasteries, in each of which there are only three monks. [1494]
6. **Scotch Ch.** Thirty 'Wycliffites' are arrested for extreme anti-hierarchical teachings, but released with a warning, the only persecution between 1433 and 1528.
7. **German Ch.** Brandt's *Narrenschiff* (Ship of Fools), one of the earliest monuments of modern German prose, enjoys a European circulation (Latin trans. 1497), owing to its satire and didactic tone. The work is discussed in the sermons of Geiler of Kaisersberg, his fellow Alsatian, and contributes to the revival of popular preaching.
8. **Italian Ch.** Savonarola's influence in Florence, steadily growing since his Lent sermons in the Cathedral, 1491, and the death of Lorenzo, now reaches its highest point. Prior of San Marco since 1491, Vicar-General of the Dominicans of Tuscany since 1493, and, since the arrival of Charles VIII., director of the policy of the city and founder of its new Constitution, Savonarola now carries out his schemes for moral reform. His influence is maintained by his sermons, by his claim to receive direct communications from God (some of which he publishes in his *Compendium Revelationum*), by his attack on the Paganism of the Renaissance in his *Triumphus Crucis*, etc., and by his commentaries.
9. **Philosophy.** With the expulsion of the Medici from Florence, the Platonic Academy is for a time broken up, and Averroistic Aristotelianism again becomes dominant in Italy, through the activity of the Paduan school, Pomponazzi, Nifo and Achillini. The Neapolitan Academy, founded 1471, becomes the most influential of Renaissance circles, in part owing to the influence of Pontano.
10. **Philology.** An edition of Musaeus appears, the first work issued from the Venetian press of Aldus, who follows it with editions of Aristotle and Aristophanes, in which he receives aid from Marcus Musurus and other Cretans.
11. **Education.** Aberdeen University is founded.
12. **Deaths.** Pico, Politian.

-
13. **Spanish Ch.** Ximenes (chosen as her confessor by Isabella, 1492, and Provincial of the Franciscans, 1494), becomes Archbishop of Toledo and Chancellor of Castile, and obtains a unique position in Church and State. [1495]
 14. **Portuguese Ch.** The Jews are expelled from Portugal by the King, in order to induce the Spanish sovereigns to give him their eldest daughter.
 15. **Philosophy.** Reuchlin's *de Verbo Mirifico* introduces the work of his friend Pico into Germany. The ideas are expanded in his *Ars Cabbalistica*, and inspire Agrippa's *Occult Philosophy*, 1510.

Court of Appeal at a fixed place, of which the President alone is to be chosen by the Emperor, and by the imposition of the Common Penny, collected by the Diet.

14. **Italy.** In return for trifling concessions, the Pope receives the obedience of France, and Charles withdraws, taking with him Caesar Borgia, who escapes. Alfonso II. abdicates in favour of his son Ferdinand, who is, however, deserted, and flies, Charles entering Naples unopposed. Maximilian, Ferdinand, the Pope, Sforza, and Venice form a Holy League (March) for the expulsion of the French, Maximilian being alarmed at French preponderance in Europe, Ferdinand fearing for Sicily, Sforza disquieted by the claim to Milan of the Duke of Orleans, derived through the Visconti. After three months in Naples, Charles marches northward (May), defeats the Venetian troops at Fornovo (July), and leaves Italy (Nov.), the Duke of Orleans remaining behind. Ferdinand, who has already returned to Naples, brings the French occupation to an end with Spanish arms (Nov.). (Their last stronghold capitulates, Aug. 1496.) The League is broken up by Sforza, who accepts French overtures for peace. The expedition, though in itself a failure, forms a turning-point in history, revealing the weakness of Italy, introducing into European politics the notion of the balance of power, and familiarising France with the ideas and products of the Renaissance.
-

15. **England.** Warbeck and James invade England; but [1496 the expedition is little more than a raid. In view of the insecurity at home, Henry makes the Intercursus Magnus with Philip of Burgundy, by which the latter throws over Warbeck, and the commercial privileges between England and Flanders are restored, violations and disagreements, however, shortly ensuing.
16. **Spain.** Philip, son of Maximilian, marries Joanna, daughter of Ferdinand and Isabella, who, by the death of her only brother (1498), becomes heiress of the Spanish empire.
-

17. **England.** Henry's demand for a subsidy to resist a Scotch [1497 invasion is resisted by the Cornishmen, who march on London, but are overpowered at Blackheath (June). Warbeck lands in Cornwall (Sep.), and is joined by 6,000 men, whom he deserts at Taunton, on the approach of the King's troops. The army melts away and Warbeck is captured.
18. **Italy.** On the departure of Charles from Italy, the Pope attacks the barons who had sided with him (above all the Orsini), calls the Spaniards under Gonsalvo de Cordova to his aid, and expels the French from Ostia.
-

-
16. **Italian Lit.** Boiardo's *Orlando Innamorato*, the first Italian romantic epic, the fame of which is soon dimmed by Ariosto's treatment of the theme and by Berni's *rifacimento* of the poem itself, 1541.
17. **Art.** The equestrian statue of Bartolommeo Colleoni, designed by Verrocchio, is completed (Venice).
18. **Social.** Columbus sends home for sale as slaves 500 prisoners, who are released and sent back by Isabella.
-

19. **Eng. Ch.** Colet returns from his studies in Italy and France, and begins to lecture at Oxford on the Epistles of St [1496 Paul, thereby aiding the movement towards classical study initiated by Selling, Linacre, Grocyn and Vitelli, and revolutionising the theological curriculum by introducing the study of the books of the Greek Testament in their historic setting.
20. **Dutch Lit.** The Chamber of Eglantine is founded in Amsterdam, the most famous of the Chambers of Rhetoric, i.e. dramatic and literary societies.
21. **Art.** Michelangelo comes to reside in Rome, executes the *Pietà* (St Peter's), and on the accession of Julius II. is commissioned to design his tomb, of which only the *Moses* (Rome) and two *Slaves* (Paris) are completed.
- Veit Stoss, the wood-carver, settles in Nuremberg, and, with Adam Krafft and Peter Vischer, workers in stone and bronze, and Dürer, renders the city for a generation the centre of German art.
22. **Social.** As a concession to the growing power of the nobility in Poland, the King allows the Diet to bind the peasantry to the soil.
-

23. **Geography.** John Cabot, a Genoese resident in Bristol, [1497 receives a patent from Henry VII. to discover and occupy lands across the Atlantic, and, with two vessels, reaches the American coast, probably at Newfoundland or Labrador, for the first time (June).
24. **Education.** The convent of St Rhadegund in Cambridge, containing two nuns, is suppressed, and its funds devoted to the foundation of Jesus College.

Celtes, after wandering in Italy and Germany, settles at Vienna and founds the Danube Literary Society for the spread of Classical culture, introduced by Peter Luder and Agricola. Humanism is in the same year introduced at Tübingen by Bebel, and at Erfurt in the circle that Mutianus Rufus gathers round him, Hutten, Eoban Hess, Crotus Rubianus and Busch.

19. **France.** Charles VIII., the last of the direct line of the Valois, is succeeded by his cousin, the Duke of Orleans, Louis XII., whose friendship is at once sought and won by Venice and the Pope. In August, Louis makes peace with Spain by the treaty of Marcoussis, which finally destroys the Holy League, and in which the partition of Naples is discussed. [1498]
20. **England.** Warbeck attempts to escape, but is captured and removed to the Tower, where Warwick, son of Clarence, is kept a prisoner.

21. **England.** Warbeck and Warwick plan a flight, and, on its discovery, are executed, Henry seizing the opportunity of destroying the last of the Yorkist stock. [1499]

22. **Italy.** Louis enters Italy to enforce his claims on Milan, whence he expels Sforza (Oct.), who flies to Switzerland. Venice joins in the war, and extends her territory beyond the Adda.

Stirred up by Sforza, the Sultan attacks Venice, who is defeated at Sapienza, and, after a three years' war, loses what remains of her Levantine empire.

23. **Switzerland.** The Swiss Confederation resist Maximilian's attempt to enforce old claims, and by the war with the Suabian League that follows, gain independence in all but name. The Confederation is now joined by Basle and Schaffhausen, and (1513) Appenzell, thus reaching the number of 13, at which it remains till Napoleon.

24. **Asia.** After a period of anarchy, Ismail wins the throne of Persia and founds the Sufi dynasty (so called from the School to which his family has belonged for generations), which lasts till 1736.

25. **Germany.** The Diet at Ausburg proceeds with the re-organisation of the Empire by establishing a Council of Regency, composed of representatives from the three Colleges of Electors, princes and towns. To facilitate administration, Germany is divided into six circles or provinces. [1500]

26. **Italy.** Sforza recaptures Milan, but is again expelled by the French and imprisoned in France.

Taking advantage of the fall of Sforza, the Pope undertakes the conquest of the Romagna. Caesar Borgia captures Imola and Forli, and, after securing the goodwill of Venice, Rimini and Pesaro.

Louis resolves to conquer Naples, but, on the opposition of Ferdinand, submits by the Treaty of Granada to a compromise, by which France is to have the kingship and the northern provinces and Spain the southern.

27. **America.** Cabral, a Portuguese, is carried by a storm to Brazil, which he declares an appanage for Portugal. Vespucci is sent out to erect a fort, and trade begins, though the settlement is for a time neglected.

-
25. **French Ch.** Louis XII. re-establishes the Pragmatic Sanction of 1438, by which the election of Bishops was given to the Chapters. [1498]
26. **Italian Ch.** The Florentine magistrates, emboldened by his excommunication, 1497, and terrified by the threat of an Interdict on the city, forbid Savonarola to preach. The spell is broken by his refusal of a challenge to ordeal (April), and, next day, San Marco is attacked and its Prior imprisoned. Six weeks later Savonarola dies a victim to his opposition to the Pope's schemes, and to the reaction produced by his strictness.
27. **Eng. Lit.** Erasmus comes to reside at Oxford, attracted by the fame of its Greek school, and forms intimate friendships with Colet and with More, (now living in London,) their fellow-work introducing the ideas of the Renaissance and preparing the way for far-reaching religious changes.
28. **German Lit.** Reuchlin's Henno, in the style of Terence, creates the Latin drama in Germany.
29. **Geography.** Columbus starts on his third voyage, discovers Trinidad, and sails along the Southern mainland.
Vasco da Gama sails round the Cape of Good Hope (discovered by Diaz 1486) and lands at Calicut, substituting Portuguese commercial supremacy for that of the Italian cities.
30. **Education.** Hegius dies, and the school at Deventer, founded by the Brethren of the Common Life, loses its influence, its traditions, however, being continued by the writings of Wimpfeling and by the schools of Elsass.
-
31. **Art.** Bramante leaves Milan on the fall of Sforza, and settles at Rome, where he perfects the classic style in his palaces and in his additions to the Vatican. [1499]
Leonardo finishes the 'Last Supper' (Milan).
32. **Geography.** Pinçon sails along the coast of Brazil (already surveyed by Vespucci, if the reputed voyage of 1497 was really undertaken), and takes possession in the name of Spain, though without making a settlement.
33. **Deaths.** Ficino, Torquemada.
-
34. **Bohemian Ch.** The Pope sends inquisitors to cope with the Bohemian Brothers, who deny the Real Presence and refuse oaths, and who exercise commanding influence, in part owing to the preaching of Lucas of Prague. [1500]
35. **Literature.** The first edition of Erasmus' collection of Adages.
36. **Philology.** Aldus founds an Academy at Venice, for the study and publication of the Greek classics. By the efforts of its members, 1000 volumes a month are sometimes issued, mainly in the italic type, borrowed from the handwriting of Musurus, and in small size.
37. **Geography.** Cortereal, a Portuguese, sails along the coast of Labrador and discovers the entrance to Hudson Strait.
-

28. **England.** Arthur, Prince of Wales, marries Catherine of Aragon, after long negotiations, but dies 1502, when Catherine, again after long negotiations, is contracted to Prince Henry. [1501]
29. **Spain.** A revolt of the Moors is provoked by the efforts of Ximenes and Talavera to effect their conversion, but is suppressed, the Moors being offered the alternative of exile or baptism.
30. **Italy.** The Pope confirms the secret treaty of Louis and Ferdinand, and decrees the deposition of the King of Naples. After a slight resistance Frederick withdraws, and the allies enter Naples (Aug.).
-

31. **Scotland.** Margaret, eldest daughter of Henry VII. of England, marries James IV. [1502]
32. **Italy.** France and Spain begin to quarrel over the division of Naples. Caesar Borgia seizes Urbino, breaks up a conspiracy of barons, reduces Sinigaglia and Perugia, and destroys the Orsini.
-

33. **Italy.** Gonsalvo de Cordova defeats the French, enters Naples (May), and, by a victory on the Garigliano and the consequent surrender of Gaeta, expels them from the country. [1503]
- Alexander VI. dies (Aug.), several of Caesar Borgia's conquests are reoccupied by their late possessors, and, shortly after the election of Julius II., Caesar himself is imprisoned for refusing to surrender the fortresses he still holds in the Romagna to the Pope.
34. **Asia.** To strengthen the settlements planted by Cabral and Vasco da Gama (in a second voyage, 1502), three squadrons (one under Albuquerque), are sent out, and a fort is built at Cochin, the commander of which, Pacheco, defeats an army sent by the ruler of Calicut.
-

35. **France.** Louis is induced by his wife to ally with Maximilian and Philip in the Treaties of Blois, promising his daughter to Charles, the son of Philip, with the reversion of Burgundy, Brittany, and Milan (the investiture of which he receives from the Emperor, 1505), and undertaking to join in seizing the mainland territories of Venice and to attack the Pope. [1504]
36. **Germany.** Maximilian defeats the Count Palatine in the war of the Bavarian Succession, and annexes part of his territory.
37. **Italy.** Aragon annexes Naples, which is ruled by Gonsalvo de Cordova till 1507, and afterwards by a Viceroy.

38. **Church Hist.** Erasmus' *Enchiridion Militis Christiani* [1501 attacks the confusion of scholasticism and ceremonies with piety, and reflects the general spirit of Colet's teaching.

39. **Scotch Lit.** Gawain Douglas' *Palace of Honour*, the principal poem of its author and the first purely allegorical romance produced in Scotland.

40. **Eng. Lit.** *The Nut-Brown Maid* first printed.

41. **Portuguese Lit.** Gil Vicente's first drama (in Castilian), [1502 influenced by the plays of Encina. Ribeiro's *Eclogues* now appear and found the pastoral school.

42. **Education.** Wittenberg University.

The Grand Remonstrance, nevertheless, claiming ministerial responsibility, only obtains a majority of 11, and a protest is drawn up by the minority. Parliaments are to be biennial, and toleration is to be granted to all but Catholics. When the King rejects these terms, the Agitators draw up the Case of the Army and the Agreement of the People, demanding biennial Parliaments, freedom of religion and trade, and equality before the law, but only obtain the sanction of the Council of Officers for manhood suffrage, though this, too, is opposed by Cromwell and Ireton. In secular affairs a return is made to the conditions of 1618. The Electoral dignity and the Upper Palatinate are left with the Bavarian house, the Lower Palatinate being restored to the son of the Winter King, with a new (8th) Electorate. Brandenburg obtains part of further Pomerania, the Archbishoprics of Magdeburg and the bishoprics of Halberstadt and Minden. Questions of ownership of ecclesiastical estates are to be settled by the conditions of 1624. The Imperial Court is restored, its members being drawn equally from Protestants and Catholics. President Molé, who desires a compromise, visits Ruel and concludes a treaty, which, however, is rejected by the nobles. A Spanish force enters Champagne, but Mazarin bribes Turenne's troops to desert their leader. The second Treaty of Ruel is made, and the Regent buys off the nobles with pensions and offices.

This measure creates a commercial navy, and may be said to found England's commercial Empire.

State. This obedience alone has rescued society from its primitive
anarchy, and can alone prevent its relapse.

Cromwell, spurred on by Harrison, arrives before the motion is put, and expels the members. The officers appoint a Council of State, which requests the Independent ministers to recommend candidates for a new Parliament. Of these the Council selects 139, who meet as the Little, or Barebones, Parliament (June). Alarmed by the attempt to carry out ambitious reforms, the more cautious declare the Parliament dissolved (Dec.). The Instrument of Government is drawn up, by which Cromwell becomes Lord Protector with a Council of 21 life members, whose concurrence is necessary for peace or war. Legislation is vested in a single house, which must meet once every third year for not less than five months, and in time of war. The Protector receives a fixed revenue and must ask Parliament if he needs more. [1653]

Hooke's claim to the discovery of the law of inverse squares is rejected by Newton. The theory is introduced into Cambridge by Clarke, Bentley, Whiston, into Oxford by Halley, into Edinburgh by Gregory. To every action there is an equal and opposite reaction.

INDEX.

Note. The numbers in the Index denote the paragraph, not the page,—the upright figures referring to 'Politics,' the slanting figures to 'Culture.' In the case of a King or Minister who is repeatedly mentioned, the years over which his activity extends are given for the sake of brevity, the figures being connected by a hyphen, and printed in blacker type.

Nearly half the names mentioned in the text will be found in the Index. Where a man is known in history by more than one title, the most familiar is given, as Bolingbroke instead of St John, and Buckingham instead of Villiers. Pseudonyms are retained in the case of such writers as George Eliot (Marian Evans) and Georges Sand (Mme Dudevant).

The political history of the chief countries of Europe is not indexed, since it can be readily traced by turning over the pages of the text; but under Germany, Italy, Austria, Turkey, are given the chief Provinces or States of which they have been composed. The less important countries and subjects are indexed in full; the more important only till the time at which the entries become so frequent that no further clue is needed. Thus, Ireland is indexed till the Union, British India till the French War, Prussia till Frederick the Great, Russia till Peter the Great, Egypt till the Dual Control, Economics till Adam Smith, Politics till Hobbes, History till Ranke, English, French and German Literature till Spenser, Corneille, Lessing respectively. In certain cases, selected departments of a subject or of national history are given, as in Philosophy, English, French and German Church History, the United States, etc.

The Countries and States in Asia, Africa, America, Australasia are indexed under their respective Continents; the Sciences under Science; the Arts under Art.

BY THE SAME AUTHOR.

**The History of
English Democratic Ideas in the 17th Century.**

THIRLWALL DISSERTATION, 1897. Crown 8vo. 5s.

"An excellent work, broad in its sweep, luminous in treatment, and painfully learned....The study is of unique value, stimulating in the breadth of its comparative method, and a fine testimony to the earnestness and truthfulness, as well as to the thoroughness, of modern historical research." (*Athenaeum*.)

"No one can be so versed in the history of the Puritan Revolution as to fail to derive instruction from the book." (Dr S. R. Gardiner, in the *English Historical Review*.)

"A concise and suggestive survey....We meet many familiar names in his pages; but we meet them in new relations to ideas, movements and events." (*The Times*.)

"All parties, religious and political, are treated with colourless impartiality." (*Morning Post*.)

"Admirably solid, judicious, well balanced and precise." (*The Speaker*.)

"A valuable addition to English historical writing." (*American Historical Review*.)

"Der Inhalt des Buches ist reich, ja überreich, zu nennen. Die politische Tageslitteratur ist kaum jemals vorher in so erschöpfender Weise ausgebeutet worden." (*Deutsche Literaturzeitung*.)
